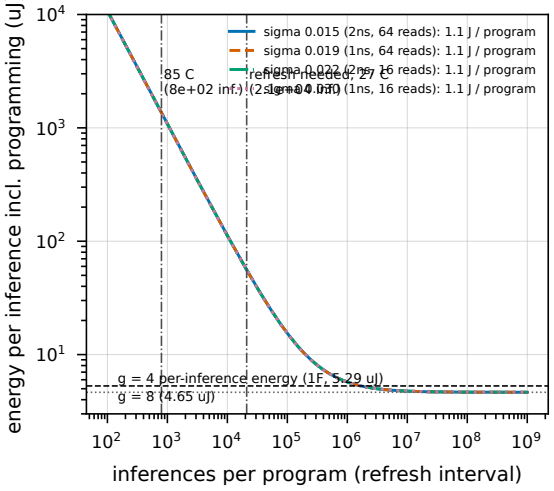
g = 4 (1F's surface, sigma_HRS = sigma_LRS)
g = 8 (1F's surface, sigma_HRS = sigma_LRS)
g = 16 (1F's surface, sigma_HRS = sigma_LRS)
measured program-verify points (model)
budget margin left (uA), best front-end point
5 K window, 8 mV droop
sigma_lnG of the LRS



sigma 0.015 (2ns, 64 reads): 1.1 J / program
sigma 0.019 (1ns, 64 reads): 1.1 J / program
sigma 0.022 (2ns, 16 reads): 1.1 J / program
sigma 0.030 (1ns, 16 reads): 1.1 J / program
85 C
(8e+02 inf.) (2s, sigma 0.030)
refresh needed, 27 C
g = 4 per-inference energy (1F, 5.29 uJ)
g = 8 (4.65 uJ)
energy per inference incl. programming (uJ)
inferences per program (refresh interval)
